

EXECUTIVE PROFILE

Selvakumaran Chandrasekaran was born on the second of July, 1993, in Coimbatore, Tamil Nadu, where he completed his schooling at DR PGV MS Chinnathadagam before earning a **Diploma in Mechanical Engineering** with specialization in **Refrigeration and Air Conditioning** from Nachimuthu Polytechnic College in Pollachi, followed by a **Bachelor of Engineering in Mechanical Engineering** from Sri Krishna College of Engineering and Technology in Kuniyathur, Coimbatore, affiliated with Anna University.

With his formal education complete, Selvakumaran stepped directly into construction. He joined **Sri Mahalaxmi Constructions**, a Coimbatore-based firm, and chose building sites over factory floors. He would remain there for the long term.

As of **April 2026**, his experience certificate confirms **twelve continuous years** with the company. That tenure has covered the full spectrum of civil engineering execution. He has worked on residential buildings, commercial structures, government contracts, highway and road projects, and civil works under the Public Works Department.

His responsibilities have been hands-on and unglamorous. He prepared and executed site layouts. He supervised on-site labour and material coordination. He enforced quality standards and chased project timelines. The experience letter issued in April 2026 describes him as **possessing strong technical skills, practical knowledge, and consistent dedication**.

Those twelve years were not spent in an office cabin. They were spent across active sites in Tamil Nadu, translating drawings into concrete, managing the unpredictable logistics of government contracts, and ensuring PWD specifications were met to the letter. That decade of fieldwork gave him an instinctive grasp of cost estimation, resource scheduling, contractor coordination, and regulatory navigation.

This long immersion in construction eventually opened a door into corporate governance. The Ministry of Corporate Affairs assigned him Director Identification Number 08355365. His **first recorded directorship** came on **7 February 2019**, when he was appointed **Director and Promoter** of Sri Mahalaxmi Housing India Private Limited. Though that company was later struck off, the appointment marked his transition from site supervisor to company director.

He subsequently served as **Director of Nilan Aruvi Renewables Private Limited** from **15 April 2025** until **12 January 2026**. The role was brief but added renewable energy exposure to his resume. Meanwhile, on **11 December 2025**, he took a more permanent position as **Director and Promoter** of **Pure Amp Energies Private Limited**, a company that remains active.

The most significant elevation in his corporate trajectory occurred on **27 April 2026**. He was appointed as an **Additional Non-Executive Professional Director** of **Progen Renewables Limited**, a public limited company. The appointment, made under the Companies Act, 2013, carries a proposed annual remuneration of up to six lakh rupees.

In this governance role, his construction and infrastructure experience becomes directly relevant. He evaluates project execution timelines, capital deployment plans, and operational risks in renewable energy installations. As of May 2026, the company is regularizing his position through shareholder approval at its Annual General Meeting.

The expectations are substantial. He must constructively challenge management proposals. He must evaluate financial controls and risk systems. He must review governance compliance and contribute to strategic decisions without managing day-to-day operations. The move from site layouts to board resolutions is unusual, yet in his case it follows a logical thread. Twelve years of building physical infrastructure have given him the grounded perspective that renewable energy boards need when assessing whether projects can actually be delivered on time and within budget.

Throughout these overlapping careers in engineering, construction, and corporate governance, Selvakumaran has maintained a stable legal identity anchored in Coimbatore.

At thirty-two, Selvakumaran Chandrasekaran defies easy categorization. He is a mechanical engineer by training, a construction veteran by practice, and a professional director by governance appointment. His timeline moves from a polytechnic workshop in Pollachi to boardrooms in Coimbatore, linked by twelve years of standing on construction sites and solving the real-world problems of materials, labour, and deadlines.

That combination of formal technical education, extensive field execution, and corporate directorship gives him a rare vantage point. He can read a balance sheet with the same fluency that he reads a site drawing. He can question a project timeline because he has personally managed hundreds of them. Whether supervising concrete pours for a PWD road contract or reviewing capital expenditure for a renewable energy plant, he brings the same disciplined, detail-oriented approach that earned him a first-class diploma and degree more than a decade ago.
